SP-1292 - for 2W service upgrade
Places old 2W A-Base meter on new 3W socket service. 50 amp MAX, limited to 120 Volt.

WHY? Why adapt a residential socket base to accept an A-Base meter?

It allows the meter drop to be updated from A-Base to socket and re-energized using the original A-Base meter. After the installation is inspected and approved, the adapter is removed and the new socket meter can be installed. The Marwell adapter is recycled and used repeatedly.

Great for system wide change-outs when code inspections often control the deployment rate.

Not intended for permanent installation.
