

Stay HOT - Meter Disconnect

The Marwell Disconnect Adapter (MDA) has stabs on the line side only. The load side is not connected, providing a positive service disconnect. The line side connections provide power only to the meter. The meter remains hot and fully operational.

The MDA-4 and the MDA-5 are used to positively disconnect residential or network service. A similar product the MDA-7, is used on polyphase self contained service. Both the MDA-5 and 7 have an active neutral connection.

The Marwell Disconnect Adapters are heavy duty devices built for repeated use. Molded in orange for easy identification from a distance. Special instructional labels are available per utility specification. Assembled from 100% UL Recognized Components. Made in the USA.

ORDERING INFORMATION
